

Customer Segmentation Analysis Report

This report presents a customer segmentation analysis using RFM metrics and K-Means clustering. The objective is to identify customer groups and recommend targeted marketing strategies.

Dataset Overview

The dataset includes customer purchase behavior metrics including Recency, Frequency, and Monetary value. These metrics help identify high-value and low-value customer groups.

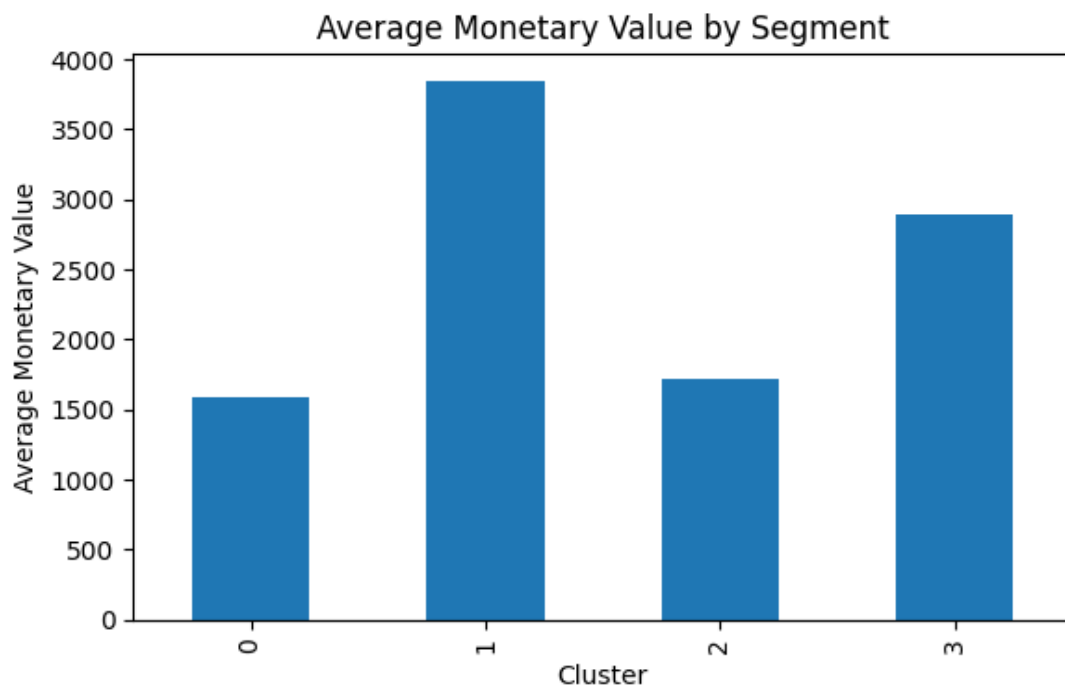

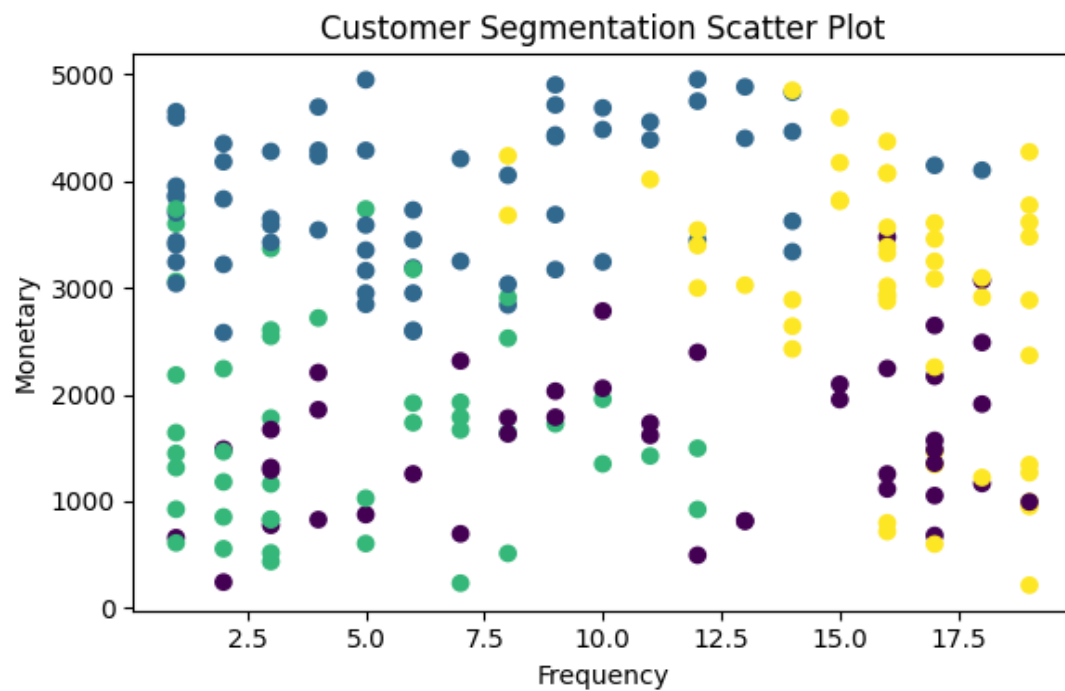

Chart 3

Cluster Profiles

Cluster	Avg Recency	Avg Frequency	Avg Monetary
0	78.57	11.0	1593.73
1	63.76	6.6	3842.9
2	23.27	4.7	1724.18
3	28.06	15.98	2888.39

Targeted Marketing Strategies

- Provide loyalty rewards and premium membership offers to high-value customers.
- Send personalized discounts and product recommendations to medium-value customers.
- Re-engage inactive customers using email campaigns and limited-time offers.

The segmentation analysis helps businesses understand customer behavior and improve targeted marketing decisions. Using RFM analysis and clustering enables better customer retention and increased revenue opportunities.
